

## CABLES Ø 3,5

Ø 3.5 cables account for 70% of the whole cables production. The same diameter is used for the production of fast-hook cables, which can be applied externally to hydraulic servo-brakes and spreadlever brakes. When repairing or servicing a machine this facilitate the replacement of the cable from the outside, thus avoiding opening the brake. The lenght of steel wire rope and sheaths can also be personalized, according to customers' specific requests. A wide range of anchorage cable terminals is available. Steel wire ropes are available in the following layouts: 1 + 6 + 12 and 7 x 7.

1 + 6 + 12	7 X 7
<b>TRACTION TEST (N)</b>	6.500
<b>WIRE NOMINAL RESISTANCE Ø3,5</b>	1770 N/mm <sup>2</sup>
<b>PERMANENT DEFORMATIONS ALLOWED</b>	NO
<b>LUBRIFICATED WITH</b>	MOLYCOTE PG75 PLASTISLIP
